- · Smartspot: An HTML5 game based on PhoneGap. Supported all of the main mobile platforms(iOS, Android and WP7) and have more than 50,000 users till now.
- · EName: A smart APP that offers user matched english names they want from user's chinese name they typed in.

Self-Evaluation
- · Extensive experience of front-end framework, CI, specification and leadership.
- · Several years of front-end development experience makes me professional and efficient，it also makes me have a deeper understanding of the internet industry.
- · I am a guy with attitude. And I believe that experience is cheap, with the increasement of time, I will get it sooner or later. But attitude is different, one either has it or doesn't.
